

Honor of co-authorship (Werner Audretsch) in standard text books on global level and advances of breast surgery and surgical breast cancer treatment.

2017 The editors invited me to write the chapter no 1 on “Fundamentals of Oncoplastic Surgery” in the leading text book of “Partial Breast Reconstruction”

2012 prior appeared comprehensive text book on “Advanced Therapy of Breast Disease”. The editors invited me to write the chapter 40 on the “Advancements in Oncoplastic Surgery of the Breast”.

I like to mention both surgical standard works to all, who are working in the “universe” of breast cancer treatment because “this specialty has changed dramatically over the past century and continues to evolve at an ever increasing pace” (Babiera/ Skoracki/ Esteva).

Both textbooks support our aim of licensed breast surgery and reliable oncoplastic planning to decrease mastectomies, save costs of repeated interventions and prevent patient’s frustration
